

## **Multiple Optic Papilla: Myth or Reality**

M. Munteanu, I. Zolog

*Ophthalmology, Retina, University of Medicine and Pharmacy "Victor Babes", Timisoara,  
Romania*

**Objective:** To study the clinical aspects of multiple optic papilla.

**Clinical Observation:** We present 2 cases with multiple optic papilla. First case, with an aspect of duplicated double papilla, where at the supranumerary papilla we noticed a cilioretinal artery. The second case, with pseudo-double papilla, in context of a medium myopia, with visualization of the choroidal circulation.

**Discussions and Conclusions:** The diagnosis of multiple optic papilla is difficult. Its support requires the presence of multiple conditions: double papillary margins, central vascularization with separate emergence, synchronous vascular pulsation, imagistic and morphopathologic arguments. So far, no clinical case with those required conditions was ever published.

**Key words:** congenital anomalies of the optic papilla, multiple optic papilla.
